- 3G TV on iPhone With the FRANCE 24 LIVE Application -

The First Live TV channel on 3G Network on iPhone

France 24 is the first television channel in the world which is accessible live and on the 3G network on iPhone. The application "FRANCE 24 LIVE", based on the Mobiclip distribution platform, is available free of charge from App Store. It allows users to display all the programmes from the France 24 channel in live streaming.

Mobiclip offers a unique experience on iPhone, allowing access to flux TV from the "chaîne d'information internationale" (French International News Network) of a high quality and via whatever network is available: Edge, 3G or WiFi. The Mobiclip platform for France 24 is personalised with the colours of the channel. It offers three live television channels in French, English and Arabic. The latest news and several magazine programmes are also available via the application, by streaming or by download.

"We are proud to provide the first application to view live television on the 3G network on iPhone. We pay great attention to the comments of the users as we continually make improvements. More than 100,000 users have already opted for the France 24 Live application on the phone." André Pagnac, CEO of Mobiclip Inc. said.

Mobiclip technology

Mobiclip is a video distribution platform, live or on demand, via the mobile phones Symbian, Windows Mobile and iPhone. It is marketed as a own-brand product and delivered "turnkey" to television channels and to the programme editors. On the telephone of the end user, the Mobiclip application adopts all the graphic elements of the channel and appears in the main menu of the telephone.

The Mobiclip company foresees a rapid uptake of its platform everywhere in the world among its international clients.

About Mobiclip Inc.

The company Mobiclip Inc, formally known as Actimagine Corp, provides a video distribution platform for mobiles. This platform is available as an own-brand product and allows the transmission of television channels and the programme listing on demand.

Mobiclip technology is provided under licence to key players in the market including Sony-Pictures, Paramount, Nokia, Sony-Ericsson or even Nintendo Co. Ltd.
